

FOLLETT OFFERS ANOTHER OPPORTUNITY TO REDUCE THE IMPACT OF BOTTLED WATER AND SAVE MONEY

Easton, PA — Follett Corporation has recently added two new models to its popular line of Symphony™ ice and water dispensers. These new "HI" models allow the dispenser to be placed on a wall in areas where space is limited.

These new models, like all Follett ice and water dispensers, help reduce the environmental impact of bottled water and lower the cost of providing water to employees by over 80% compared to bottled water. For a 100 person office, a single Follett ice and water dispenser can eliminate the impact of producing, transporting, and disposing of or recycling either hundreds of 5 gallon water bottles or approximately 25,000 single serve bottles per year while saving up to \$5,000 annually.

Ideal for employee break rooms, factory floors, and other refreshment areas, Follett dispensers can provide an almost unlimited supply of both fresh filtered water and ice to enhance productivity and wellness as well as provide a superior refreshment experience for employees. With optional SensorSAFE™ touch-free dispense actuation, dispensing can be totally hands-free for improved sanitation. All models produce high quality Chewblet® ice that is preferred by more than 2/3 of consumers.

A Symphony ice and water dispenser will be on display at the 2009 World Workplace Show in the Follett booth #325.
